HYACINTHS

Hyacinths offer the finest possible combination of scent and color. Early springtime blooming brings out the most beautiful tones of colors while other flowers are still dormant. Hyacinths should be planted any time from October 1st to December 1st, in light, rich, well drained soil. Plant bulbs 5 inches deep and about 6 to 8 inches apart, and mulch where ground freezes hard.

TO OUR CUSTOMERS IN THE SOUTHERN STATES

If you have had trouble growing Tulips successfully, try planting on the north or east side of the house. A little shade seems to be a big help. In order to avoid warm weather after setting out the bulbs, we recommend planting in November or early December. Soak the ground thoroughly in dry weather. Follow the same instructions for Hyacinths and Narcissus, except the latter should be planted in October or early November.

TULIPS

Plant 6 to 8 inches deep in soil; planting may be done from October until early December. Recommended to protect them from severe cold with about 2 inches of peat moss, decayed manure, or even old leaves and grass.

CROCUS

Crocuses have been in cultivation at least three hundred years. They flower at a time when every flower is of value. For outside culture, it is advisable to mix a few naphthalene flakes with the soil where the bulbs have been planted, since mice and squirrels are very fond of crocus bulbs. Plant 2 to 3 inches deep.
